IDENTIFIERS	Consumer Skills; Consumer Skills Kit (NAEP); National Assessment of Educational Progress

ABSTRACT

This results manual is the third part of the Consumer Skills Kit which also includes a set of items and a guide (see note). Data from surveys conducted by the National Assessment of Educational Progress (NAEP) to investigate seventeen-year-old students' consumer skills is provided. The manual presents national results for seventeen-year-old students, for seventeen-year-old students by sex, for seventeen-year-olds in the eleventh grade, and for seventeen-year-old eleventh graders by sex. In the data tables each item is identified by a unique NAEP identification number found on each printed exercise in the Consumer Skills Kit. Estimated percentages of correct responses for these single items are provided, except in cases such as attitudinal items, for which correct responses were not defined. Percentages for each response alternative are then given. For open-ended items the percentages of those responsing in "correct" or "acceptable" categories are listed. (YLB)

THIS DOCUMENT HAS BEEN REPRODUCED EXACTLY AS RECEIVED FROM THE PERSON OR ORGANIZATION ORIGINATING IT. POINTS OF VIEW OR OPINIONS STATED DO NOT NECESSARILY REPRESENT OFFICIAL NATIONAL INSTITUTE OF EDUCATION POSITION OR POLICY

CE 027 758

The work upon which this publication is based was performed pursuant to Contract No. OEC-0-74-0506, of the National Institute of Education. It does not, however, necessarily reflect the views of that agency.

The National Assessment of Educational Progress is funded by the National Institute of Education. It is under contract with the Education Commission of the States. It is the policy of the Education Commission of the States to take affirmative action to prevent discrimination in its policies, programs and employment practices.

This results manual is the third part of the Consumer Skills Kit, which also includes a set of items and a guide. The complete kit is available from National Assessment for $15.00. Separately, the Consumer Skills Results Manual is $7.60; Guide to an Assessment of Consumer Skills, $2.00; Consumer Skills Items, $5.80.

Reprinted January 1980

ISBN 0-89398-457-4

This report is made pursuant to Contract No. OEC-0-74-0506. The amount charged to the Department of Health, Education, and Welfare for the work resulting in this report (inclusive of the amounts so charged for any prior reports submitted under this contract) is $28,330,530. The work culminating in this report was carried out under Dr. Roy H. Forbes, Project Director.

The cost figure cited above represents the total amount of money expended since late 1973 on assessments in art, career and occupational development, reading, writing, social studies/citizenship, science, basic life skills, mathematics and consumerism, resulting to date, in numerous reports, papers, articles, presentations and assessment materials, many of which are used in state and local assessment programs. A complete list of all such materials is available upon request.

INTRODUCTION

Several recent surveys conducted by the National Assessment of Educational Progress (NAEP) investigated 17-year-old students' consumer skills. To assist others interested in evaluating consumer skills, National Assessment made available a Consumer Skills Kit (1978), including the items used to measure consumer skills and a manual describing how to use the items, titled Guide to an Assessment of Consumer Skills (1978). The items can be used as instructional materials or as a means of assessing students' skills.

Those using the items for evaluation purposes may wish to compare their results with those obtained by National Assessment. This results manual provides the data needed for such comparisons. Included are national and selected population group results for 17-year-old students on all items in the consumer kit. Items and scoring information are not given here but are found in the consumer kit.

The Consumer Skills Items

During the spring of 1977, National Assessment conducted a survey of the basic life skills of 17-year-olds, which included some consumer skills. As a result of interest in that survey and in a 1973 study of consumer mathematics, an expanded survey of 17-year-olds' consumer skills was administered in the spring of 1978. A second mathematics assessment, also conducted in 1978, included items dealing with consumer mathematics.

Consumer skills items were classified under eight major topics in the consumer skills kit: consumer behavior, contracts, economics, energy, finances, consumer mathematics, consumer protection and purchases. In addition to specific skills and knowledge, attitudes were assessed for a number of these topics. Background questions, investigating students' sources of consumer information were also included.

Reporting the Data

National Assessment does not report scores for individual students, but instead provides estimated percentages of correct responses for single items. Thus, when we say that "85% of the 17-year-olds gave a correct response," we mean that we estimate 85% of the 17-year-olds would have given a correct response if all the 17-year-olds in the country had been assessed.

This report presents only percentages of 17-year-olds giving correct responses, except in cases such as attitudinal items, for which correct responses

were not defined. In these cases, percentages for each response alternative are given. (Correct answers for the consumer items are listed in the Guide to an Assessment of Consumer Skills.) For open-ended items, that is, items in which students supplied the answers, the percentage of those responding in "correct" or "acceptable" categories are listed.

In addition to national results, National Assessment provides results for various population groups. The sample used for the consumer skills surveys was considerably smaller (two-fifths to one-half the size) than that usually drawn by National Assessment. Consequently, the number of population groups for which results could be calculated was substantially lower than for a full-scale assessment. This manual presents national results for 17-year-old students, for 17-year-old students by sex, for 17-year-olds in the 11th grade and for 17-year-old 11th graders by sex.

Using the Data Tables

Each item is identified by a unique NAEP identification number found in the lower left-hand corner of each printed exercise in the Consumer Skills Kit (1978). These numbers must be used to locate results in this manual. The first character in each ID number shows the assessment in which an item was administered. A "C" means the item is from the 1978 consumer assessment; an "I" indicates the item is from the 1977 basic life skills assessment (BLS); a "5" means the item is from the 1978 mathematics assessment; and an "8" shows that the item was included in the 1978 consumer assessment but was originally from the 1977 energy assessment. Results are ordered by the first character in the ID number with "C's" first, followed by "I's," "5's" and "8's." Results are then ordered alphabetically, according to exercise number, within the four categories.

In the Consumer Skills Kit, items are ordered by the eight major topics of consumer skills, and items from more than one consumer survey are included under most topics. It is important to use the NAEP ID number from the exercises in the kit to locate results in this manual, since the order in which results are printed is not the same as that used in the consumer kit.

Table 1 shows the format of the data tables in this manual.

The first line in the data tables gives the NAEP ID number, the exercise part (A, B, C, and so on) and the number of the correct response for multiple-choice items, found under "Key." Response choices for all exercises, with the exception of mathematics, were listed by number. Mathematics response choices have ovals that are not numbered; the reader must assign a number to each oval, with the first oval getting a "1," the second oval, a "2," and so on, in order to match the correct-response numbers in the data tables.

Correct answers to open-ended exercises included all answer categories beginning with a "1" in the scoring guides. (Scoring guides are included with items in the Kit.) Percentages of students answering in any correct answer category for an exercise have been added together. The total percentage

answering an open-ended item correctly is labeled "11" or "1X," under "Key" in the data tables.

TABLE 1. Example of Results Display

			ALL 17-YEAR-OLDS			<--- 11TH GRADE--->		
				SEX			SEX	
NAEP NO	PART	KEY	NAT	MALE	FEM	NAT	MALE	FEM
I-100001	A	1						
		P	91.6	91.7	91.6	93.5	93.7	93.4
		SE	0.9	1.1	1.2	0.8	1.3	1.1
	B	2						
		P	60.7	65.2	56.6	61.4	67.0	56.4
		SE	1.5	2.5	1.9	1.8	2.9	2.6
	C	1						
		P	65.8	67.9	63.8	69.0	72.7	65.9
		SE	1.5	1.9	2.4	1.8	2.2	2.9
	D	1						
		P	94.1	93.9	94.2	94.5	94.7	94.2
		SE	0.8	1.2	1.0	0.8	1.3	1.1

As previously mentioned, correct responses were not defined for attitudinal items. For these items, percentages are shown for all response categories, unless a particular category was not used. A "0" label indicates students in that category did not respond to the item. A code of "9" has been assigned to "I don't know" responses for all exercises. On some attitudinal items, percentages in two response categories have been added together since it was felt that this would provide more meaningful information. A response line labeled "1 + 2" means that answers 1 and 2 have been added together; a label "3 + 4" means that answers 3 and 4 have been added, and so forth.

The second line in the data tables contains the percentages of responses (P) for the choice listed on the first line, for the nation and population groups listed across the page. The third line gives the standard error (SE) of each percentage. These standard errors may be useful when comparing your results with those obtained by National Assessment.

Exercises in the latter half of each of the basic life skills assessment booklets suffered from rather low response rates. The lack of response to an exercise is difficult to interpret. Failure to respond to an exercise could mean either that the student read the exercise and chose not to respond to it or that the student did not have the opportunity to read or respond to the exercise within the allotted assessment time. Consumer, energy and consumer mathematics items did not suffer from low response rates.

The low basic life skills response rate has been handled in two ways in the results tables that follow. First, percentages of correct responses for BLS

(beginning with an I) exercises with national response rates greater than 90% have been adjusted to reflect only the performance of students who actually answered the exercises. Those who failed to respond to the exercises are not included in the analysis. Second, only exercises with nonresponse rates less than 10% have been included in the manual. Data from exercises with larger percentages of nonresponse would provide an unreliable basis for generalization; these exercises are indicated in the tables by the phrase "data unreliable -- low response rates."

In a few cases, item parts were deleted following the assessment and not scored; these parts are listed in the tables as "part data not analyzed."

Comparing Your Results With National Assessment Data

To make valid comparisons with National Assessment results, you should try to make your administration conditions as similar as possible to NAEP's. Conditions and age ranges used by NAEP are described in the instruction manual included with the consumer kit, Guide to an Assessment of Consumer Skills.

As stated earlier, National Assessment does not provide scores for individual students or groups of students, but rather reports the estimated percentage of students (P) responding correctly to particular items. Following is the statistical equation that you can use to determine this percentage:

Let P = the percentage of students answering an item correctly.

$$P = \frac{\text{number of students responding correctly}}{\text{number of students responding}} \times 100.$$

For example, assume that 100 students responded to an item and that 86 selected the correct answer choice. The P for this item would be:

$$P = \frac{86}{100} \times 100 = .86 \times 100 = 86\%.$$

The formula for determining the difference between your results and the national results on each item is as follows:

Let D = the difference between your results and the national results and P = the percentage of students answering an item correctly.

Then $D = P_{yours} - P_{national}$.

For example, assume that your P for a particular item is 75.0% and the national P is 70.0%. Using the formula above,

$D = 75.0\% - 70.0\% = 5.0\%$.

Thus, your students' performance level would be 5.0 percentage points above the national sample.

Once the differences in percentages have been computed, you may want to determine if they are statistically significant. In other words, are they statistically reliable differences? The formulation below explains how to determine this.

Whether you sample or assess your entire population of students, first compute your own standard error[1] and then calculate the standard error of the difference according to the following formula:

$$\text{Standard error}_{\text{difference}} = \sqrt{(\text{standard error}_{\text{national}})^2 + (\text{standard error}_{\text{local}})^2}.$$

A difference between percentages of larger than two standard errors of that difference would allow you to be 95% confident that the difference was real.

Results by sex can be compared with national percentages for those groups in the same manner. Results for 11th graders should only be compared for those 11th graders who are 17 years old.

Mean (average) percentages on sets of items can be compared with national results using the same equation:

Let D = the difference between your results and the national results and $\overline{X}$ = mean percentage on some set of items.

Then $D = \overline{X}_{\text{yours}} - \overline{X}_{\text{national}}$.

Mean results for groups can also be compared in this way.

---

[1]The finite correction factor $\left(\frac{N-n}{N}\right)$ usually should not be included in your standard error formulation since the comparisons to be made are for your school or district results versus the nation, and not for the particular group of students you happen to have at this point in time.

**Percentages for this exercise have not been adjusted for nonresponse. This exercise contains three open-ended and three multiple-choice parts. Percentages are given for each multiple-choice question (parts A, E and F). The final category, "Summary," shows the percentages of students giving at least one acceptable response to each of the open-ended exercise parts B, C and D.*
